

IN BETWEEN
THISTED CULTURAL SPACE

The large number of the trees are the most important resource of this park, they provide a calm and nice atmosphere which is very helpful to read, think and create.

But only the lower part is available for users.

Compared to the lower level, the higher level is calmer and bigger. The good view from the tree top could also provide an impressive experience for users.

CONCEPT

I try to design a walking system between the trees to support the demands. Using “platforms”, “rail bridges” and “nets” to connect the trees together and provide a totally new forest experience to the citizens.

You can find your home in such a view

CONTEXT

Context

The project focused on the forest in the middle of the city. KDF's design adding 2 playground into the park, one in the north, another in front of the library and Kommune. They also redesigned the open-air theatre in the south part. A new culture house would also be built next to the theatre. This new designs can largely active the forest park to make it nice and fresh.

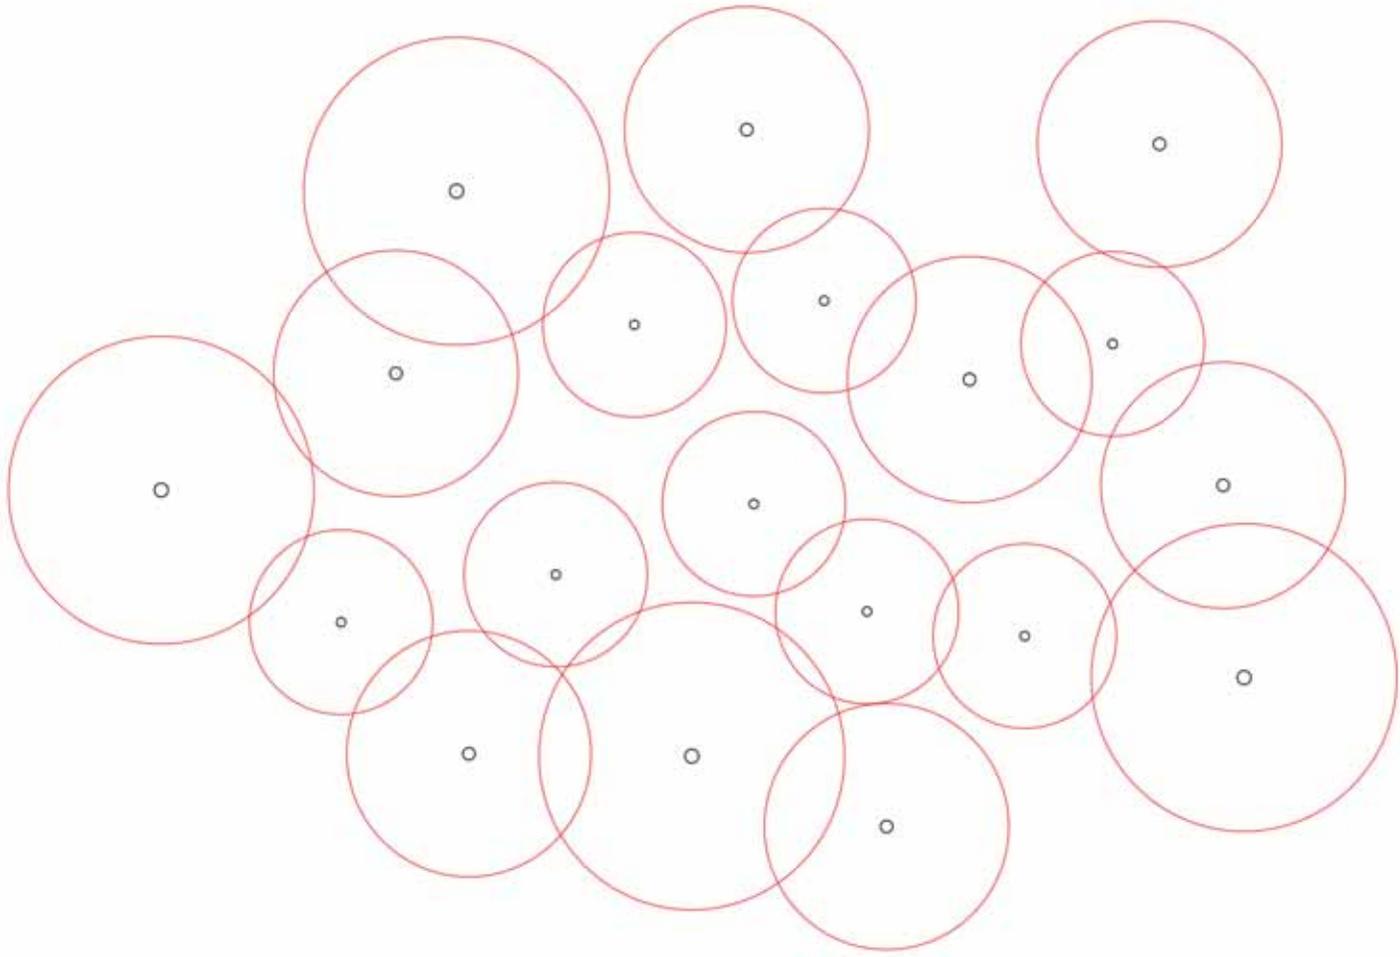

I choice the site in the center of the park for my design. It is not far from the new playgrounds and theatre., but still calm and give users enough space to think and create. Being close the park roads, it is easy to get people's attention.

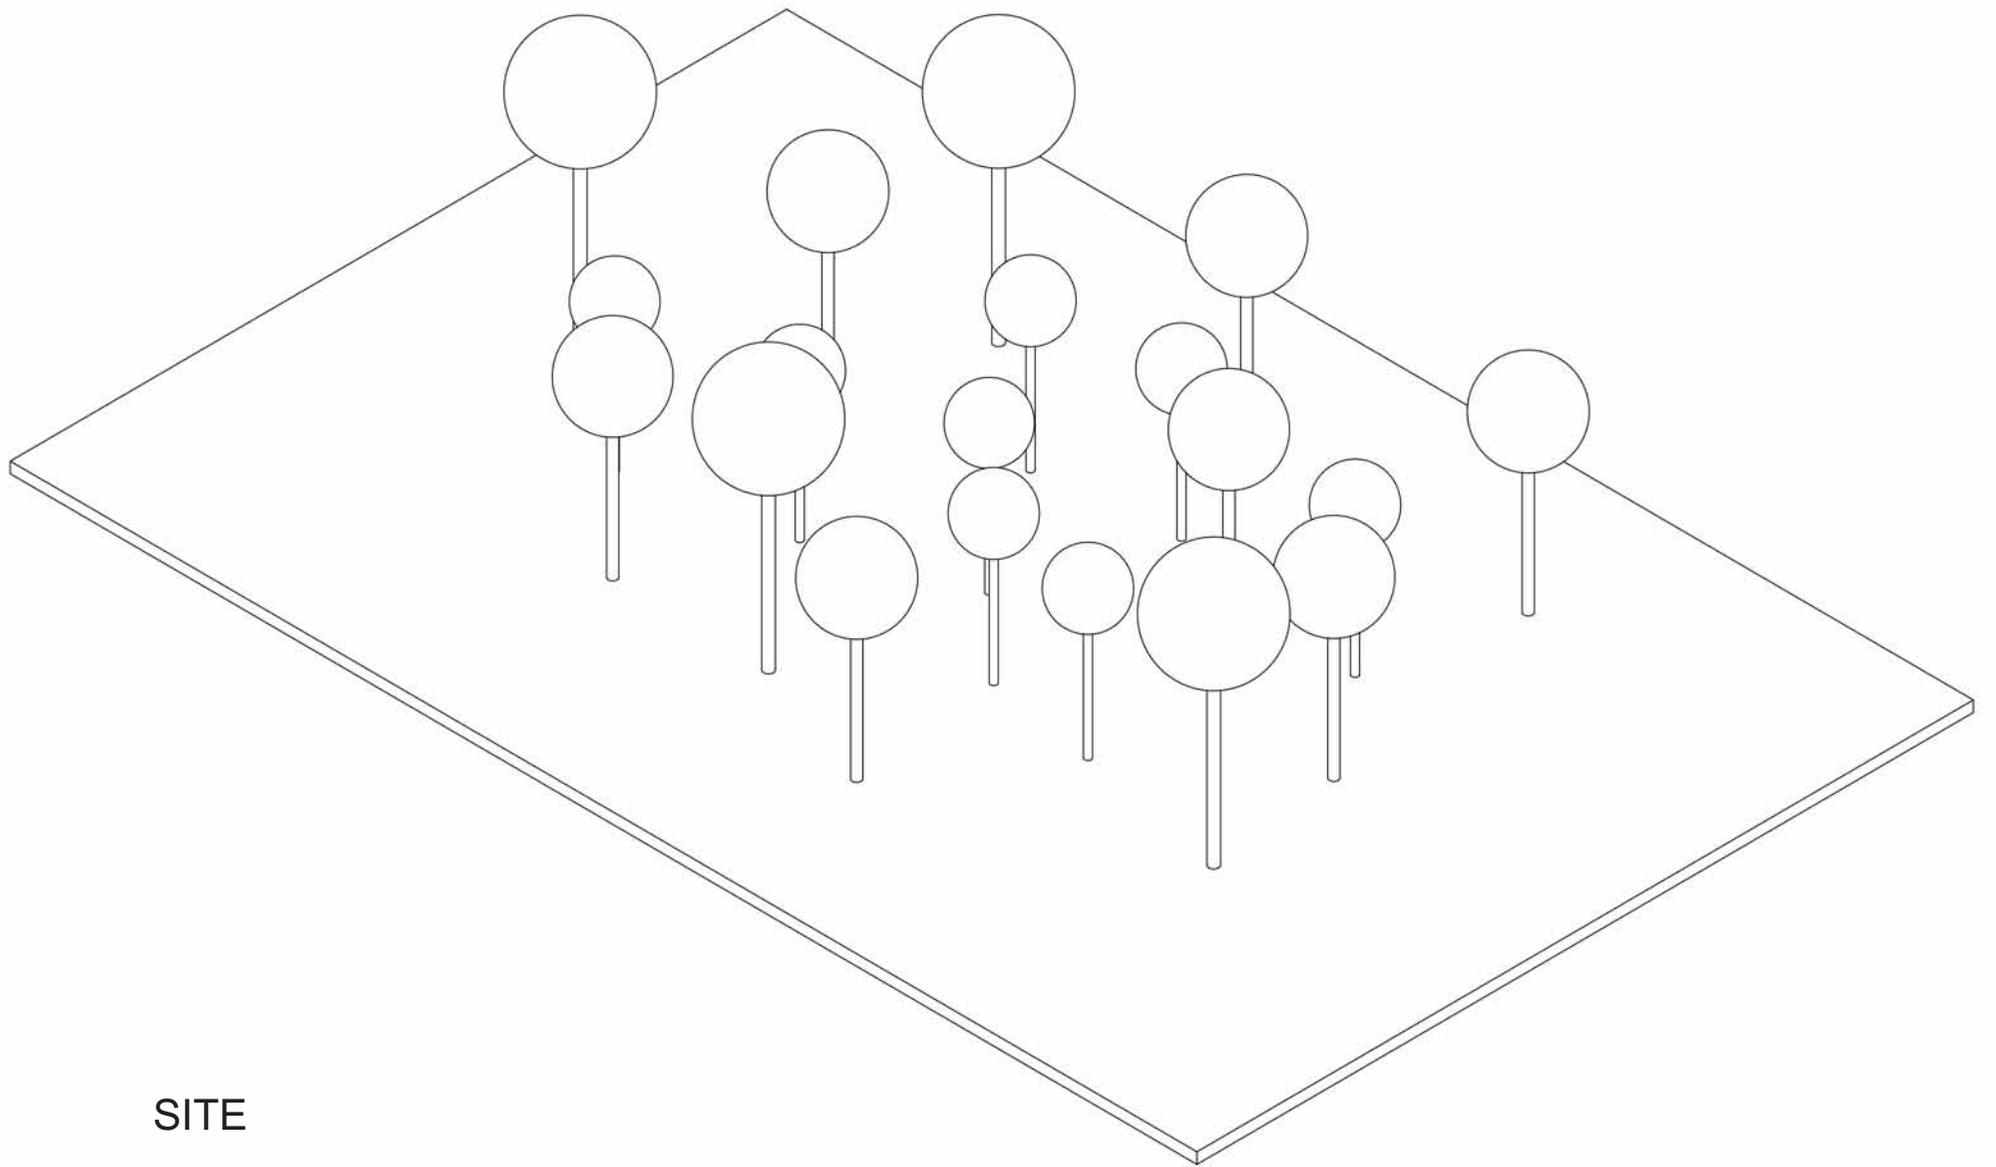

The large amount of trees provides a good condition for my design. In the center part near the mainroad, the vegetation is consisted of grass and trees (10m-15m). In the wilder places of the park, there is more shrubs (1m-3m) and higher trees (10m-20m). Most of the trees here is old and strong for my design. I divided the trees to 3 level: under 10m, 10m-15m, over 15m, and design 3 scales of platforms for each of them.

Though Thisted is at the north part of Denmark, at most of time in a year, it has good weather for outdoor activities.
